It currently consists of 29 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          preserved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        as soon as it is available and the accession number will be
sequence updated (26-May-2000).

It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps contigs are represented as runs N, but the trinished sequence are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequencing vector: PCR products; 100% of reads Chemistry: Dye-terminator ET-amersham; 100% of reads Chemistry: Dye-terminator ET-amersham; 100% of reads Chemistry: 162010 bases at least Q40 Consensus quality: 162010 bases at least Q30 Consensus quality: 164639 bases at least Q30 Consensus quality: 165230 bases at least Q20 Insert size: 166048; sum-of-contigs Quality coverage: 6.27x in Q20 bases; sum-of-contigs Quality coverage: 6.27x in Q20 bases;

* NOTE: This is a 'working draft' sequence. It currently consists of 20 contigs. The true order of the places is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Chemistry: Dye-primer ET; 100% of reads Chemistry: Dye-terminator Big Dye; 0% of reads Assembly program: Phrap; version 0.990319 Consensus quality: 157404 bases at least Q40 Consensus quality: 160944 bases at least Q30 Consensus quality: 160944 bases quality: 160944 bases quality: 160944 bases quality: 160944 bases quality: 160944 bas

```
transporter gene (hoatl).";
Submitted (SEP-1999) to the EMBL/GenBank/DDBJ databases.
-i- FUNCTION: MEDIATES THE NA(+)-INDEPENDENT TRANSPORT OF ORGANIC ANIONS SUCH AS P-AMINOHIPPURATE AND ALPHA-KETOGLUTARATE.
-i- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. BASOLATERAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDLINE=99160894; PubMed=10049739; Race J.E., Grassl S.M., Williams W.J., Holtzman E.J.; Race J.E., Grassl S.M., Williams W.J., Holtzman E.J.; "Molecular cloning and characterization of two novel human renal organic anion transporters (hOATI and hOAT3)."; Biochem.
